How to Fix the LaTeX `name{Hfootnote.XX}` Error

Ryan T. Moore*

30 March 2012

1 The `name{Hfootnote.XX}` Error

You compile your TeX document and you get this error:

```
ERROR: pdfTeX warning (dest): name{Hfootnote.4} has been referenced
    but does not exist, replaced by a fixed one

--- TeX said ---
--- HELP ---
No help available
```

Everything in the body of your document, your footnotes, et cetera, is correct. What's the situation?

2 A Solution

If you're using the `setspace` and `hyperref` packages, make sure that they are in this order in your preamble:

```
\usepackage{setspace}
\usepackage{hyperref}
```

Hope this helps!
